SUSTAINABLE SOLUTIONS DÜSSELDORF

2 & 3 December 2026 - Hall 13 & 14, Messe Düsseldorf

EXHIBITION FOR THE RENEWABLE ENERGY SECTOR IN NORTH RHINE-WESTPHALIA

SOLAR SMART STORAGE EV CHARGING GREEN HVAC

PRESS RELEASE – Düsseldorf, 4 November 2026

Sustainable Solutions Düsseldorf 2026 brings the renewable energy industry together in North Rhine-Westphalia

On 2 & 3 December 2026, Sustainable Solutions Düsseldorf will once again bring together professionals from across the renewable energy sector at Messe Düsseldorf. Building on the success of previous editions, the exhibition continues to strengthen its position as a key business platform for solar energy, smart storage, EV charging and green HVAC in North Rhine-Westphalia.

With its renewed name and broader positioning, Sustainable Solutions Düsseldorf reflects the ongoing transformation of the energy market. The industry is moving beyond individual technologies towards integrated energy systems, in which generation, storage, distribution and consumption are increasingly interconnected. The exhibition provides a central meeting place for manufacturers, distributors, wholesalers, installers, planners and other sustainability professionals to explore these developments and discover new business opportunities.

A broader perspective on the energy transition

The transition to a sustainable energy system requires more than individual technological innovations. The integration of photovoltaics, battery storage, electric vehicle charging, smart energy management and sustainable heating solutions is becoming increasingly important for both businesses and consumers.

Sustainable Solutions Düsseldorf brings these developments together under one roof, offering visitors a comprehensive overview of the latest products, technologies and solutions. From solar panels and battery systems to charging infrastructure and green HVAC technologies, the exhibition focuses on practical applications that support the further development of the energy transition.

The broader positioning also reflects the changing needs of the market, where flexibility, system integration and intelligent energy management are becoming increasingly important.

Innovation, knowledge and business opportunities
The exhibition is designed to provide professionals with direct access to the latest market developments and innovations. International manufacturers, distributors and wholesalers will meet regional installers, project developers, energy consultants, planners and other industry professionals from North Rhine-Westphalia and beyond.

Alongside the exhibition floor, visitors can attend a programme of free expert seminars addressing current challenges and opportunities within the renewable energy sector. Industry experts and market specialists will share their knowledge on technological developments, market trends, regulations and practical solutions.

The programme aims to combine strategic insights with actionable knowledge that professionals can apply directly in their daily business.

An international concept with a strong regional focus
Sustainable Solutions Düsseldorf is part of the international Solar Solutions exhibition series, which connects renewable energy professionals across several European markets. With established exhibitions in Amsterdam, Düsseldorf, Leipzig and Wien, and further international expansion, the organisation continues to build a strong network for the sustainable energy industry.

The Düsseldorf edition maintains its clear regional focus, connecting international suppliers with the specific needs and opportunities of the North Rhine-Westphalian market.

“Our concept is built around bringing the right companies together with the right professional audience,” explains Thea Kranz, Head of Marketing at Sustainable Solutions Europe. “The energy transition is developing rapidly, and the market increasingly needs integrated solutions rather than individual products. With Sustainable Solutions Düsseldorf, we want to provide a platform where professionals can discover these solutions, exchange knowledge and develop new business relationships.”

Strong regional partnerships
Close cooperation with regional renewable energy associations remains an important part of the exhibition concept. By working together with organisations such as LEE NRW, Sustainable Solutions Düsseldorf ensures that regional market developments, industry challenges and the needs of local professionals are reflected in the exhibition.

These partnerships strengthen the connection between international innovation and the regional renewable energy market, while creating additional value for both exhibitors and visitors.

Registration and visitor information
Sustainable Solutions Düsseldorf 2026 will take place on Wednesday 2 December and Thursday 3 December 2026 at Messe Düsseldorf, in halls 13 and 14.

The exhibition is exclusively open to professionals active in the renewable energy and sustainability sectors.

With an invitation code from an exhibitor, industry partner or media partner, visitors can register for free admission. Without an invitation code, tickets are available for €75 excluding VAT per person. Press can request free tickets per email.
